- **SIMPLE:** Paternity testing using DNA is very simple. It can be done using standard cotton swabs available at most pharmacies. You simply rub the swab on the inside of your cheeks. We do the rest.
- **ACCURATE:** The DNA technology we use surpasses the stringent testing standards of FBI and the courts. It is as good or better than DNA identity tests used by CSI (crime scene investigation). This means that you can expect over 99.9999% accuracy. The results are admissible in court of law*.
- **INEXPENSIVE:** Today, DNA testing is inexpensive and rapid. We are a non-profit organization, and we strive to bring the most cost effective testing to you and your family. If you are unable to afford the cost of testing, please ask us for help. Through special programs, we may be able to help you.
- **PRIVATE:** The test can be done in the privacy of your own home. Your personal information is not provided to any outside agency without your explicit written request. Additionally, anonymous testing is available and can be provided to you at no additional cost.

* If the paternity testing is for legal purpose, proper chain of custody procedures including fingerprinting and pictures are required. Our non-profit laboratory is registered with CLIA and CAP accredited for performing high complexity DNA testing services.
